

B

Maximum Number of Roots (count)

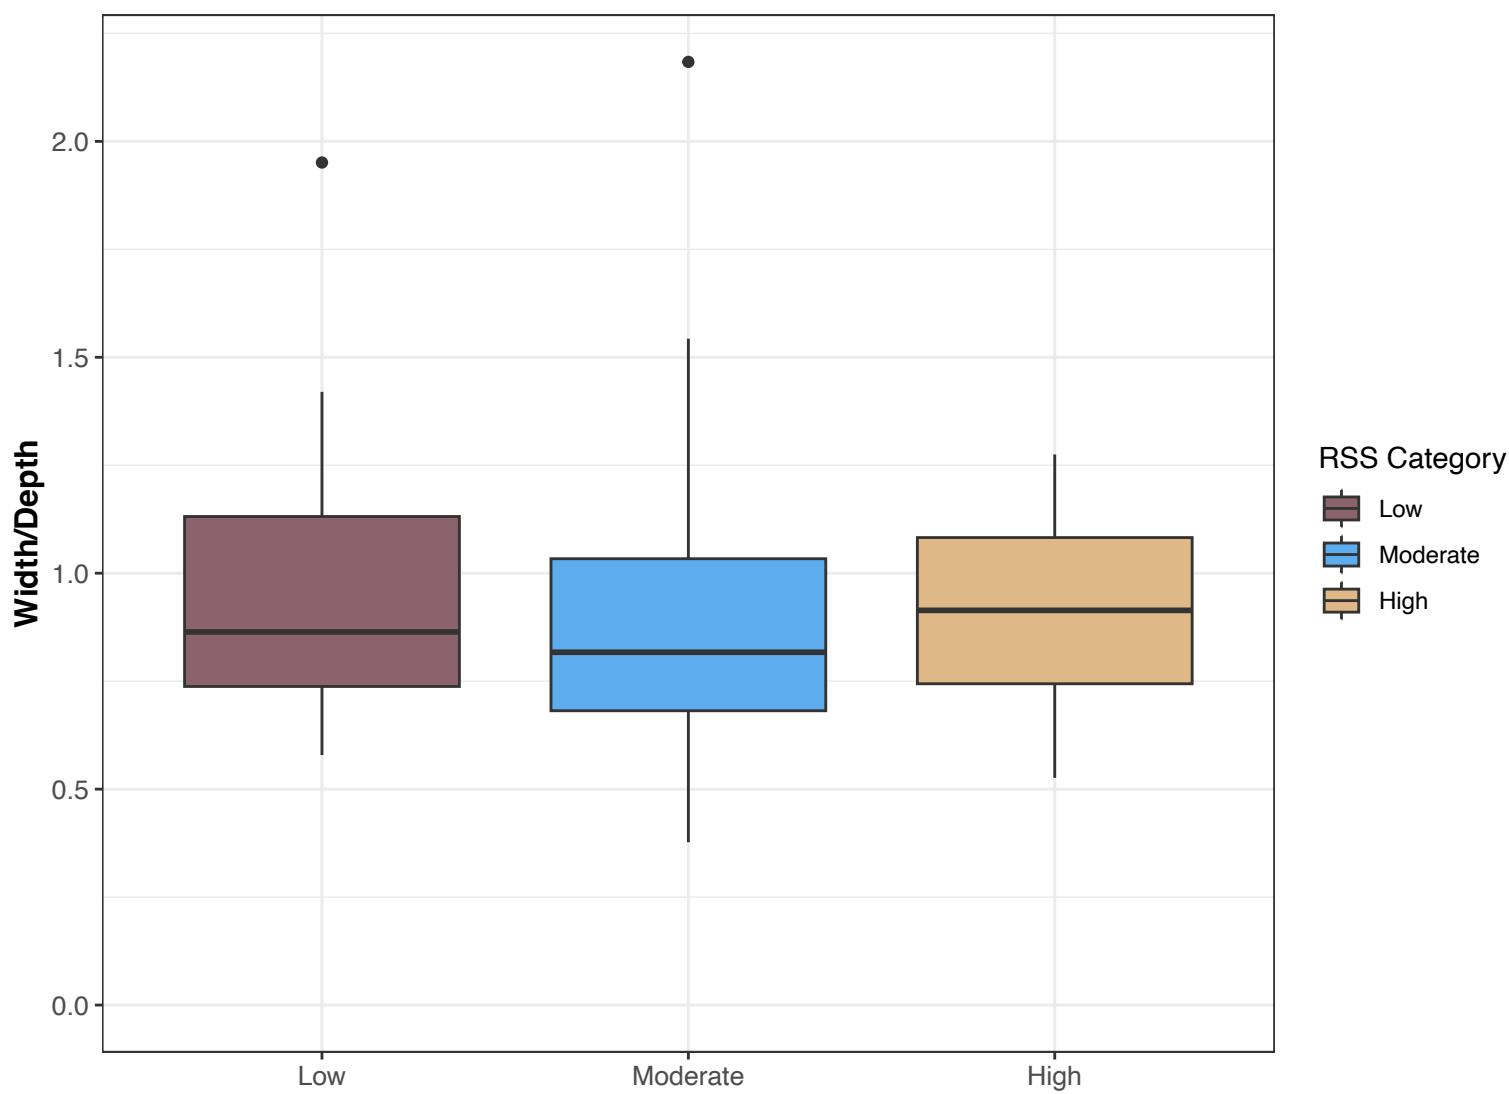

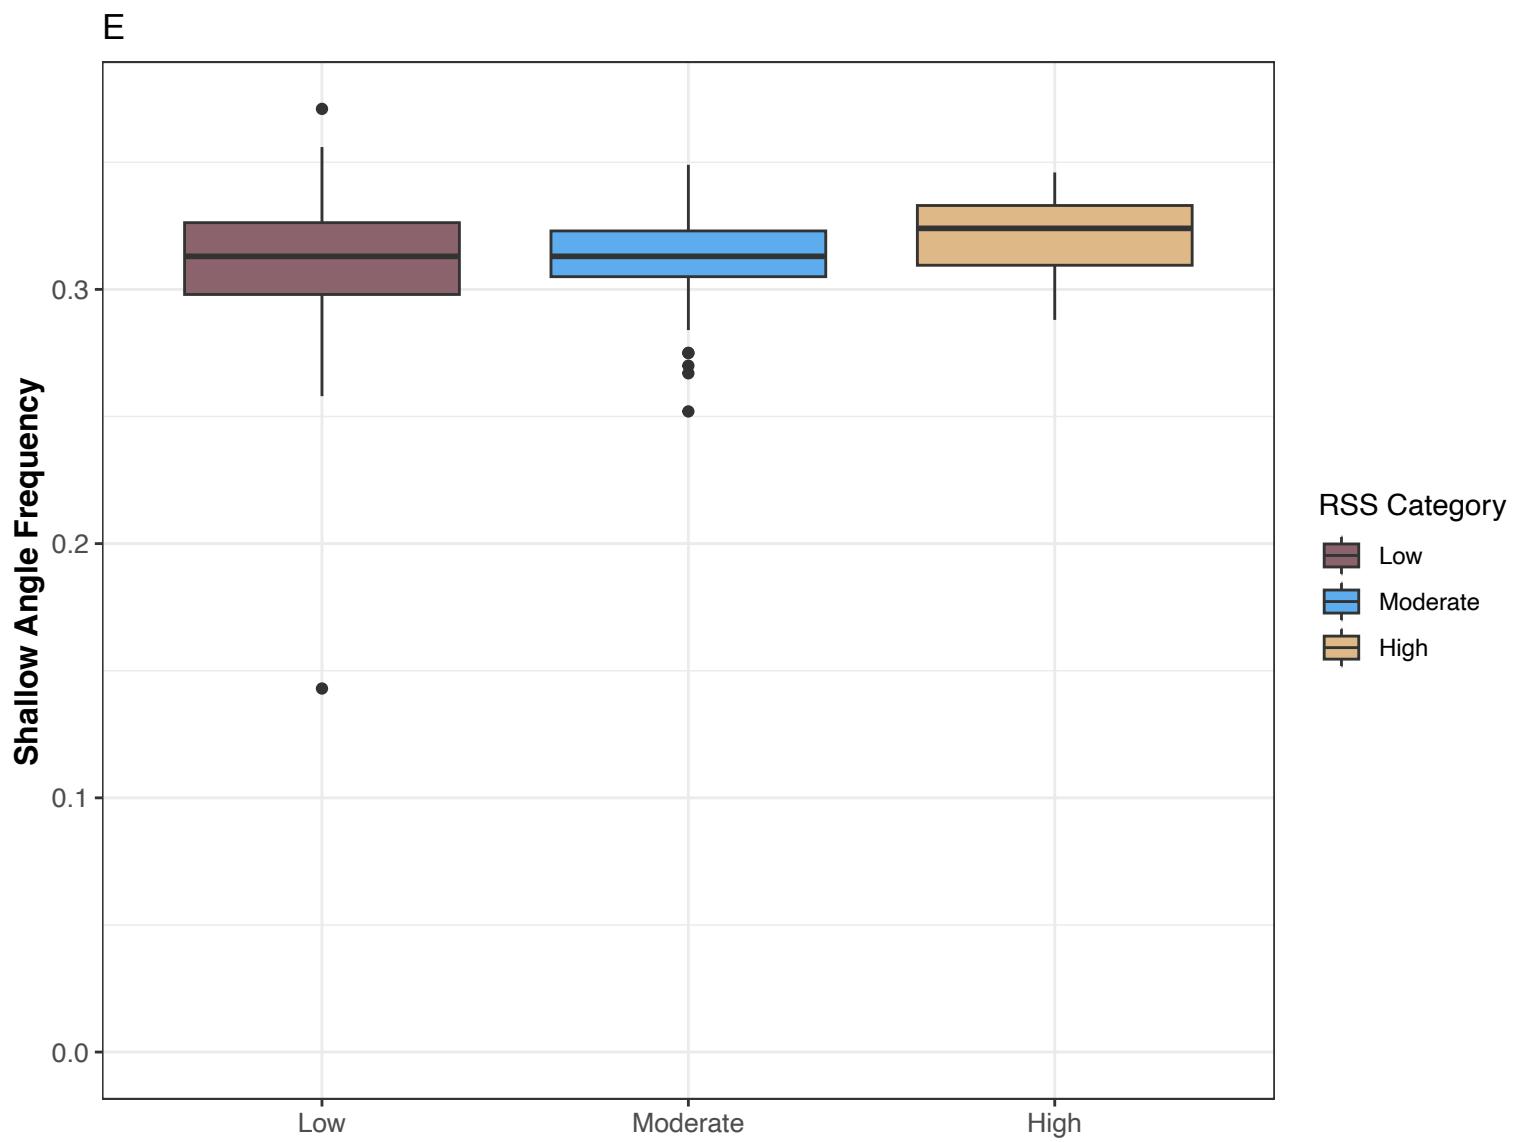

C

Number of Root Tips (count)

D

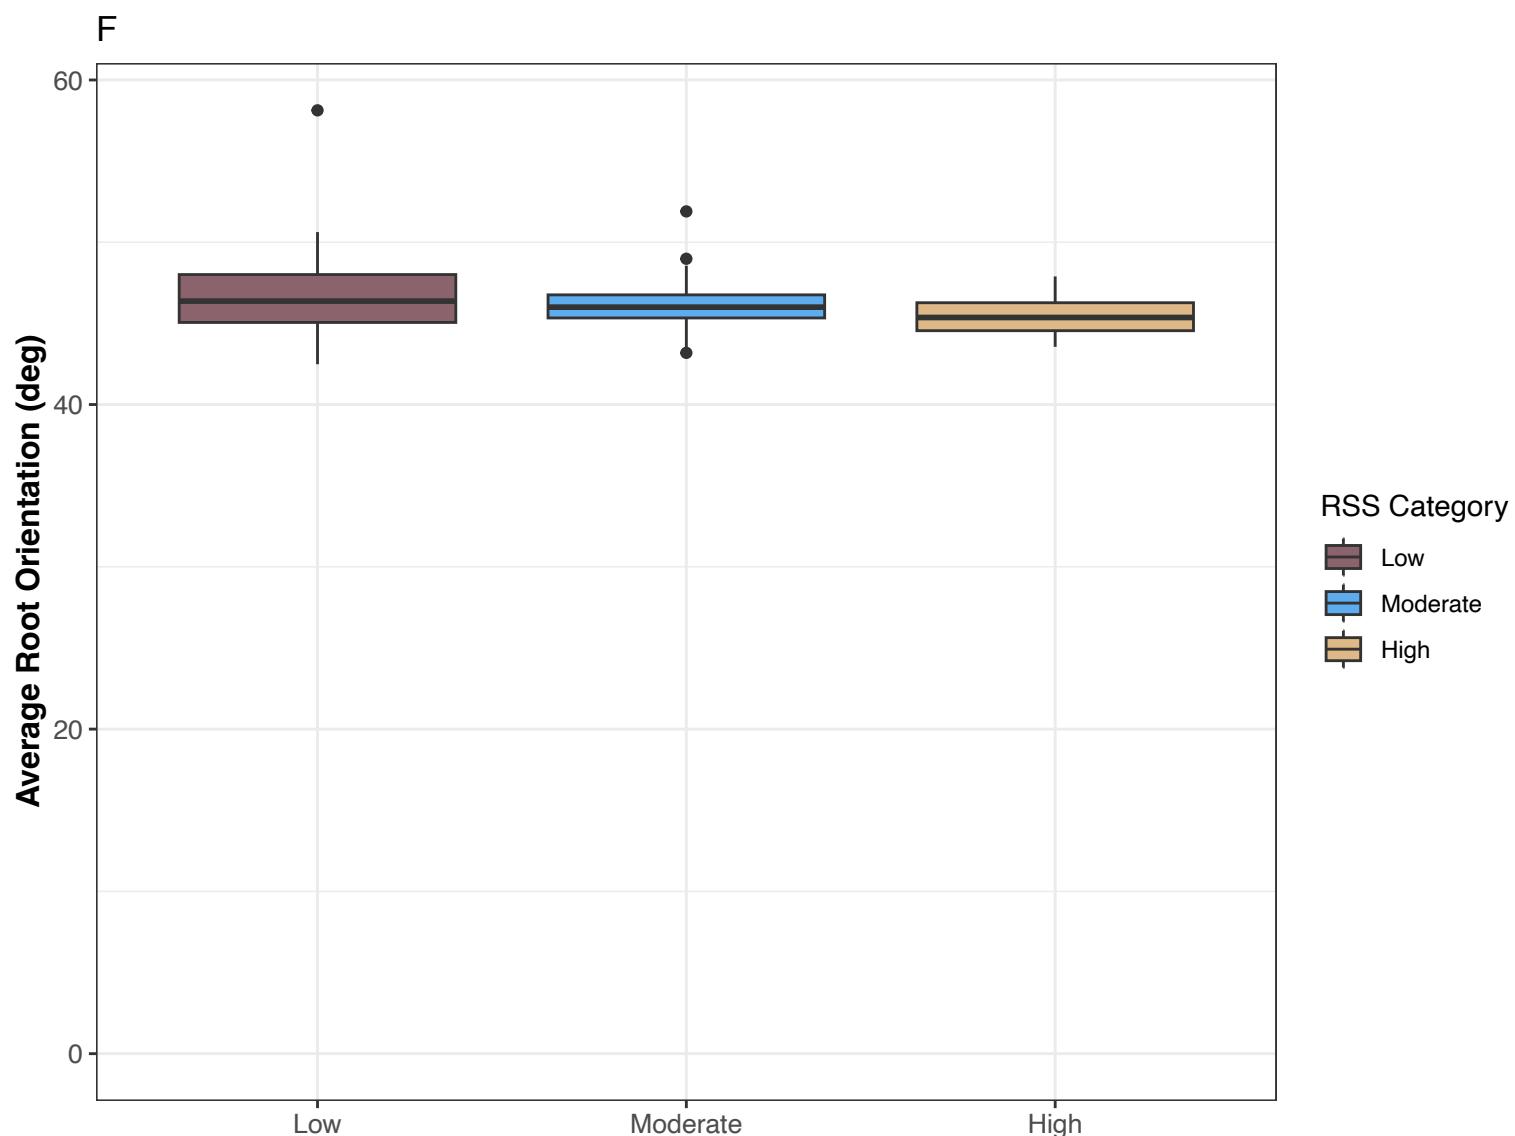

Figure S4. Root system stiffness categories were not significant for some below-ground root architectural traits. (A) Median number of roots (B) maximum number of roots, (C) number of root tips, (D) width/depth, (E) shallow angle frequency, and (F) average root orientation. While traits varied among root system stiffness categories, the difference did not pass the threshold for significance. Colors indicate root system stiffness categories.
